warranty

Garage door servicing and repair should only be provided by a trained professional.

Call **13 62 63** or visit **bnd.com.au** to find a reputable service and repair professional.

Here are four simple steps to maintaining your B&D garage door. We recommend doing this every three to six months - and cleaning every two weeks.

- » **Protect against corrosion:** Wash down the external surface of your door with clean water and a soft brush or cloth every 14 days, or more often in coastal areas.
- » **Assist with smooth operation:** clean the internal sections of the guide tracks with a cloth dampened with mineral turps or methalyted spirits. For rolling doors, polish the tracks to remove dirt.
- NOTE:** Do not grease the lock.
- » **Reduce wear on hinges (Paneliff® doors only):** lubricate with an all purpose machine oil like RP7 or WD40.
- » **Keep springs clean:** If accessible, wipe over springs with an oily rag.

Important: please take care when cleaning and maintaining your garage door. Do not attempt to touch or clean the door or components whilst the door is in motion.

Servicing your garage door once in the first 12 months and every two years thereafter is crucial to keeping your door operating in top condition.
